

Orientations of research when integrating digital
technologies in mathematics education:
Emerging technologies and emerging types of
learning

Theodosia Prodromou

University of New England

Abstract:

Bringing the potential of enormous impact to human future life and bearing the name of an emerging technology, artificial intelligence is coming back strongly to our territory of research. I will discuss the Orientations of research when integrating digital technologies in mathematics education, emerging technologies and emerging types of learning and how these orientations of research co-evolve and change education, rapidly and effectively.
